

## Profile Mac v3.2 Integration Features – from May 2015

Intrahealth, WellSouth, BestPractice and ACC are pleased to announce major new integration features in Profile Mac v3.2, either already in general release or due for general release at the end of May 2015.

### BestPractice Southern eReferrals

Automatically accessing all data from Profile and in general release for a number of weeks, this functionality is already providing significant advantage to clinics.

Dr Mathew Stokes of Lumsden Medical Centre says *“I think All southern P4M sites should be made aware of the BPAC eReferral system. It has saved us \$ in postage, we get proof of delivery with acknowledgment within the day of referral, I am seeing faster appointment times for patients too.”*

### WellSouth Web Portal

Offering extensive integration with Profile Mac, this portal provides CVDRisk and other clinic guidance, as well as automatically updating metrics and claiming with the PHO (including creating bulk billing records in Profile Mac to allow clinics to track their income). This portal is in beta testing at Lumsden Medical Centre and is expected to be available to all clinics by the end of this month.

### eACC45 Injury Claim Form

Elegantly integrated into Profile Mac’s Approvals, the new electronic ACC45 submission process is currently in “User Acceptance Testing” with ACC and is expected to start beta testing in selected clinics next week.

### eACC18 Medical Certificate

Also elegantly integrated into Profile Mac’s Approvals, the new electronic ACC18 submission process is currently in “User Acceptance Testing” with ACC and is expected to start beta testing in selected clinics next week.

Dr Mathew Stokes of Lumsden Medical Centre says *“BPAC eACC18 - saves us time, patient postage & bother, ACC instant update of work info, not to mention less paper as we can now print to A5 (and Neater than other competitors products....).”*
